                                          The sequence is that of a clone encoding hek-L protein, a protein that can bind hek (a cell surface receptor tyrosine kinase). Hek-L is the first known ligand for hek and can be used to study cellular processes regulated by hek (which may be involved in tumorigenesis). It is also an immunogen for antibody production, as a reagent for detecting hek or hek-L in in vitro assays, to determine binding of hek proteins, to purify hek proteins, and to carry diagnostic or cytotoxic agents to particular leukaemia cells that express the hek senilyen. Hek-L also binds the elk tyrosine kinase receptors.
                                                                                                                                                                                                                                                       15 GACCTCGGGGCGATGCGGCTGCTGCCCCTGCGGACTGTCCTCTGGGCCGCGTTCCT 74

Poly(A)+ mRNA isolated from human umbilical vein endothelial cells (HUVE) was treated with TNF cyclohexamide and used to construct a lambda gill cDNA library. The library was screened using radiolabelled cDNA inserts were isolated may be some of B61 BNA. Hybridising cDNA inserts were isolated and subcloned into pGEM 7zf (+) for sequencing. Clone B61.1 contained the entire OFR encoding a protein of 205 residues (24 kb). The B61 gene is involved in early inflammatory response and serves as a marker. It may be detected by inflammatory response and serves as a marker. It may be detected by corbes or by antibody-based immunoassay of biological fluids such as plasma, CSF or urine. These assays make it possible to predict a worsening in a disease process and allow the quantitative assessment of the magnitude of the inflammatory response. This information will allow the earlier admin. Of appropriate therapy, thereby shortening the disease process and limiting the patient's exposure to anti-inflammatory/immunosuppressive therapy. B61 induction is rapid and profound, hence it is easily detectable. The B61 response is highly specific to proinflammatory stimuli, being only made by cells exposed to lipopolysaccharides or cytokines such as IL-2 and TNF and not growth factors or interferon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             232
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    200

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The N-terminal sequence of EBP isolated from the conditioned medium of the SK-BR-3 cell line was identical to the N-terminal amino acid sequence predicted from the expression of the B61 gene (Holzman et al., Mol. Cell Biol. 10, 5830 (1990); W0920/7094).

CDNA encoding EBP having the N-terminal NH2-DRHTVFWN SSNPKFRNEDYTING was cloned and sequenced and, as expected, found to be identical to the B61 gene. The EBP gene expressed in CHO cells resulted in at least two polypeptides having different mol. wts. C-terminal sequencing revealed only the sequence RENAA-COOH which indicated a polypeptide of 150 amino acids (EBP1-150).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAS11244-AAS1518 encode for novel human secretory and transmembrane
PRO polypeptides. The PRO polypeptides are useful to detect other
PRO polypeptides, to link bloactive molecules to cells expressing
PRO polypeptides, to modulate bological activities of cells expressing
PRO polypeptides, and to detect the presence of mammalian lung, colon,
breast, prostate, rectal, cervical or liver tumours by comparing PRO
polypeptide expression in a cell sample to that in a control sample.
Some of the 275 sequences are also useful to stimulate the release of
tumour necrosis factor-alpha (TMF-alpha) from human blood, the
proliferation or differentiation of chondrocytes, the proliferation or
gene expression in pericyte cells, the release of proteoglycans from
cartilage, the proliferation of those rear utricular supporting cells or
cartilage, the proliferation of inner ear utricular supporting colls or
CT-lymphocytes, the release of a cytchine from peripheral blood
monocytes (PBMCs), or the proliferation of endothelial cells. Some of
the RPO polypeptides may modulate glucose or free fatty acid uptake by
skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide
c to factor VIIA. The PRO polypeptides can be used in assays to identify
monocytes (collectes in binding interactions. The polymore and any account of the province of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     æ,

                                                             The present sequence is one of seventeen nucleic acids encoding PRO polypeptides. The PRO nucleic acids, polypeptides, agonists and antagonists are useful for treating cardiovascular, endothelial or angiogenic disorders in a manmal. Examples of these disorders include cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosolarosis, hypertension, arterial restenosis, Reynaud's disease, rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis and lymphangitis. The PRO polypeptides and antagonists are also used to prevent tumour angiogenesis and for treating periodontal diseases. They are also used to stimulate wound healing and tissue regeneration. The PRO nucleic acids, polypeptides and anti-PRO antibodies are useful for diagnosing a cardiovascular, endothelial or anglogenic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    343

The present sequence is one of twenty eight nucleic acids encoding PRO polypeptides and their agonists, including antibodies, peptides, and small molecule agonists, may be used to treat various tumours, e.g., cancers such as breast cancer, ovarian cancer, renal cancer, colorectal cancer, uterine cancer, prostate cancer, lung cancer, bladder cancer, central nervous system cancer, melanoma or leukaemia. They are also useful for treating other disorders such as neuronal, glial, atrooptal, hypothalamic and other glandlar, macrophagal, epithelial, stromal and blastocoelic disorders, and inflammatory, angiogenic and immunological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TCCTCTGGGCCGCGTTCCTCGGCTCCCCTCTGCGGGGGCTCCAGCCTCCGCCAGGTAG 115

The human pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antiinflammatory activities, and can be used in gene therapy. The polynucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to

detect, treat or prevent pancreatic disorders, especially cancer. Agonists and antagonists to the antigens can be screened for. The pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and tharget the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to creat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                     between tumour accitions a mucrate and vice that separate activity. (1)

work as modulators of Ras activity by inducing expression of tumour

suppressor genes. (1), and polypeptides encoded by them, are useful as

targets for diagnosis or therapy and in screening to determine the

effects of an active compound (potential pharmaceutical) on a cell line,

particularly for diagnosis and treatment of tumors, especially by

modulating expression of (1) (by gene therapy, antisense RNA or ribozyme

polypeptides (by administration of the polypeptide or its activator,

antibody (optionally as a conjugate) or inhibitor). The method allows

identification of many class II tumour suppressor genes (i.e. genes that

are not primary targets for tumour-initiating mutations).

AAH81492-AAH82376 represent the human and rat derived nucleic acid

fragments described in the method of the invention.
                                                                                                                                                                                                                                                                                                       This invention describes a nucleic acid (I) with differential expression
                                                                                                                                                                                       Nucleic acids differentially expressed between tumor and normal cells, useful for diagnosis or therapy of tumors and for screening active
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           465

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful in medical disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AsS64197-As894564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        330 gigitgiticagccaggacccgggctccaaggccgicgccgaccgctacgctgtctactg 389
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              63 GGCCGCGTTCCTCGGCTCCCCTCTGCGGGGGCTCCAGCCTCCGCCACGTAGTCTACTG 122

receptors. It was isolated from a human placenta cDNA library using primers (see also AATA1295-96) based on isolated peptides (AAM000365-38) of HEK4 BP. The cDNA can be used for recombinant prodn. of HEK4 BP, useful for modulating the growth and/or differentiation of EPH subfamily receptor-bearing cells. It can also be used to detect or quantitate HEK4 BP nucleic acids, to detect abnormalities in the HEK4 BP gene, or to control expression levels of HEK4 BP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        122
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 182

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3, Application US/08240124
Patent No. 551668
GENERAL INFORMATION:
APPLICANT: BECKMANN, M. P.
APPLICANT: CERRETTI, DOUGLAS P.
TITLE OF INVENTION: CYTOKINE THAT BINDS THE CELL SURFACE
TITLE OF INVENTION: RECEPTOR HEK
NUMBER OF SEQUENCES: 4

                                                                                                                                                                                                                                     Sequence 8, Application US/08299567

Patent No. 5747033

GENERAL INFORMATION:

TITLE OF INVENTION: METHOD OF ENHANCING THE BIOLOGICAL

TITLE OF INVENTION: ACTIVITY OF EPH FAMILY LIGANDS

NUMBER OF SEQUENCES: 8

CORRESPONDENCE Regeneron Pharmaceuticals, Inc.

STREET: 777 01d Saw Mill River Road

CITY: Tarrytown

STATE: New York

COUNTRY: U.S.A.

Patent No. 551658
GENERAL INFORMATION:
APPLICANT: BECKMANN, M. P.
TITLE OF INVENTION: CYTOKINE THAT BINDS THE CELL SURFACE TITLE OF INVENTION: RECEPTOR HEK
NUMBER OF SEQUENCES: 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             MEDIUM TYPE: Floppy disk
COMPUTER: Apple Macintosh
OPERATING SYSTEM: Apple System 7.1
SOFTWARE: Microsoft Word for Apple, Version 5.1a
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/240,124
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CLASSIFICATION: 435

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                 636
